

Staebel EvacSmart Evacuation Mat

Product Code: 9934

Designed to be positioned under the mattress, allowing carer to remove the patient from their bed and escort them to safety in the event of a fire.

The Staebel EvacSmart Evacuation Mat has four elastic straps to place over each corner of the mattress so that daily bed making can occur as normal. A lengthy strap at each end of the device allows the nurse/carers to gently lower the patient to the floor without causing them a manual handling risk trying to lift the patient.

The mattress and patient are then lowered onto the floor and can be slid to a safer area quickly and effectively. Once in a safe area the patient can remain on their mattress. Much thought has gone into the design of this device with durability and patient comfort our primary consideration. Suitable for bed with lying surface that does not exceed the width and length.

Specifications:

Product Code	99347	99347W
Size	Standard	Wide
Width	900 mm	1000 mm
Length	2050 mm	2050 mm
